PROJECT FINANCED
FROM THE NRDI FUND

INTRODUCING COBRA 6XE PRODUCT

From now on, you will be able to make bone replacement right in your dental office immediately with the new milling machine made by **Pi Dental Kft.**

CBCT recording for immediate imaging, and using data in the CAD program.

The machine converts a CBCT image model in STL format into the CAD program, where you can design a three-dimensional virtual model of bone replacement on the missing bone surface.

COBRA 6Xe
